Now you can custom Washing Machine shaft for semi and fully automatic Washing Machine. direct from manufacturers in China. OEM/ODM Services Available. A washing machine shaft is a part of the internal mechanism of a washing machine that helps to agitate the clothes during the wash cycle. It is typically located in the center of the tub and is connected to the drive motor. The shaft is usually made of metal and is attached to the agitator or drum, which is responsible for moving the clothes around in the water. The shaft rotates at various speeds during the wash cycle, depending on the wash setting selected. It is an important component of the washing machine, as it helps to ensure that the clothes are thoroughly cleaned and rinsed.
